Many investors are looking to reduce their climate impact, but we lack a common understanding of the best methods and approaches for doing so across different asset classes and sectors. We are pleased to be working with IIGCC and more than 70 investors across Europe to assess and build consensus on best practice. This will help investors effectively implement their ambitions to reduce carbon emissions and increase investments in climate solutions in line with the Paris goals.”

Lucian Peppelenbos, Senior Responsible Investment and Governance Specialist, APG Asset Management
The Paris Aligned Investment Initiative will:

- Develop definitions for key concepts relating to alignment of portfolios with the goals of the Paris Agreement and build consensus around these among investors.
- Analyse the potential approaches and methodologies that could be used to assess alignment of different asset classes, to provide a menu of practical options for assessing and achieving alignment to Paris.
- Enable investors to understand the implications of transitioning portfolios by testing the approaches and methodologies for transition using real world portfolios to analyse financial characteristics, risks and opportunities associated with transition of portfolios.
- The outputs of the initiative will enable investors to start transitioning portfolios and measure alignment to the goals of the Paris Agreement, using common, robust and transparent approaches.

Who we are

The Institutional Investors Group on Climate Change (IIGCC) is the European membership body for investor collaboration on climate change and the voice of investors taking action for a prosperous, low-carbon future. IIGCC has more than 230 members, mainly pension funds and asset managers, across 16 countries, with over €30 trillion in assets under management.

Our mission is to mobilise capital for the low carbon transition and to ensure resilience to the impacts of a changing climate by collaborating with business, policy makers and fellow investors. IIGCC works to support and help define the public policies, investment practices and corporate behaviours that address the long-term risks and opportunities associated with climate change. Members consider it a fiduciary duty to ensure stranded asset risk or other losses from climate change are minimised and that opportunities presented by the transition to a low carbon economy – such as renewable energy, new technologies and energy efficiency – are maximised.
